# Lightning Warning System Fanling & Deep Water Bay

In our ongoing mission to offer the best service to our Members & Guests we have recently added the number one lightning prediction system in the world, Thor Guard.

Here is how the system works:

- If you hear a 15 second horn blast you are under **RED ALERT** conditions, lightning is predicted to strike within a 4 kilometer radius. You are advised to seek shelter, **should you continue to play you do so at your own risk.**
- Once you hear three 5 second horn blasts, conditions are deemed **ALL CLEAR** and it is safe to resume play.
- Caddies have been instructed to seek shelter when the lightning warning signal is sounded. The Club suggests that either the golfer asks their caddie to remain with them for 30 minutes to see if the storm will pass or release the caddie and allow them to return to the clubhouse, as per bye-law 23.1 (d).
- Should you miss your tee time as a result of the **RED ALERT** conditions, reasonable endeavors will be made to reschedule a later tee time depending on availability.

**If you do not seek shelter when the warning signal has been sounded the Club will not be liable for any injury resulting from a lightning strike.**
